## High Current Metering System

### Description

The LKP-15 is a high accuracy, "closed-loop" Hall effect system designed to accurately and reliably measure unidirectional dc bus currents up to 15 k amperes. This "system" consists of a two-piece measuring head, which installs around the bus, an electronics unit and two multi-conductor cables connecting the two. This model supersedes the following LEM and "Halmar" models: LKC-15.

### Application

The LKP-15 is particularly well suited to measure individual as well as total bus currents in Electro-chemical processes including aluminum, chlorine, copper, manganese, titanium, zinc as well as electroplating and coating processes.
